

A stacked histogram showing the distribution of CDR3 lengths for different antibody types. The x-axis is labeled 'CDR3 length' and ranges from 20 to 40. The y-axis represents frequency. The histogram is divided into several categories represented by different colors: grey, orange, red, yellow, green, blue, purple, and maroon. The distribution is unimodal, peaking around a CDR3 length of 31. The orange category is the most prominent in the peak region.
